

Sonnet About Experiment

Global warming is a problem today
and greenhouse gases aren't going away.
Society, politics, have failed thus far
to create regulations up to par.
Some scientists have looked at clouds for help
to reflect light so the ice caps won't melt.

One major factor is the aerosol,
which absorbs and reflects but that's not all—
the length of time that they spend in the air
are, for this experiment, all I care.
Carbonaceous, sulfate, and sea-salt trials
were studied but none made the extra mile.

The carbon and sea salt performed the best;
Sulfates and water reflected much less.

“aren't” → “arn't”
“Society” → “So-cie-ty”
